

Savin Dmitriy

Frontend Developer and System Administrator

Summary

- With a Bachelor of Engineering and hands-on experience in frontend development, I specialize in building scalable, high-quality applications using Next.js, React, and Redux Toolkit. I have a strong passion for creating smooth, engaging animations that enhance user experience without sacrificing performance. I pay close attention to detail — from robust type safety with TypeScript and Zod to accessible UI components. My goal is to deliver polished, accessible, and reliable products that users genuinely enjoy using. I'm always eager to learn new technologies and push the boundaries of what's possible on the web.

Experience

Frontend Developer and System Administrator
Brest Regional Library Network

Dec 2020 - Present
Brest, BY, Belarus

- Developed full-stack Next.js applications with App Router and server components
- Implemented data fetching and caching using RTK Query, React Query hooks, and Redux Toolkit
- Managed global state using Redux Toolkit (slices, store configuration, middleware)
- Built end-to-end type safety with TypeScript, Zod schemas, and inferred API types
- Maintained legacy React codebases with Class Components
- Created reusable, accessible UI components using shadcn/ui, Material UI, Tailwind CSS, CSS Modules, and Styled Components
- Validated form data and API responses with Zod + react-hook-form integration
- Used Docker for containerization and consistent development environments
- Version control and collaboration using Git (branches, pull requests, rebase, merge)

Education

Bachelor of Engineering (BEng)
Brest State Technical University (BrSTU)

2014 - 2019 Brest, Belarus
